

ANTIVIBRATION MAT

dB Anti Vibration Matting is our industrial matting with excellent sound insulation and dampening qualities.

dB Anti Vibration Matting is a mat of rubber granulates for the absorption of vibrations as well as for impact sound insulation. It has unique compression recovery capability and has exceptionally resilient characteristics. The ideal area of application is for a material pressing between 0,10N/mm² and 0,20N/mm².

	Thickness	12.5mm
	Dimensions	1.25 x 1m
	Area	1.25m ²

All test data is site test data with suitable ceiling treatments & flanking paths removed. For more construction details for the test results please contact the office.

“This is a great product for areas of high amounts of vibration. It is softer than our other matting products so reduces vibrations.”

The team at Floorscan Acoustics

FEATURES

- Excellent in industrial applications
- Excellent dampening qualities
- Easily cut and shaped
- Easily and quickly installed
- Can be installed as a floor or under machinery or equipment
- Can also be used to line out machinery housing and equipment to reduce vibrations travelling through the structure
- Noisy neighbour solution

SUITABLE FOR USE IN
